

USociable Specs and Dimensions

Page Specifications

This is to help you prepare images and other objects so they format correctly

Editing your Pages

You are given a default page when you create new. It is plain white and gray and not very exciting. However, it is pretty easy to dress it up using CSS code or the built in USociable editor. You will find it easier to do your design work on your profile and pages if you take some time to prepare your backgrounds and graphics before you go in to add them. You can upload your images to USociable (up to 20) but it is just as easy to link in pictures from external sources on the web.

Profile and Page Sizes
Profiles and pages have a maximum width of 1024 px. This is the main table that contains all the information. You will be able to customize your background image which will show behind your content and beyond the edges of the table on the left and right.

Main Navigation Bar
This is the main USociable Navigation. It becomes transparent on your profile and pages, but you can effect the color of the text using CSS.

Page Navigation
This is a sub-menu that lets you move between a user's pages and profile. This is automatic.

Page Icon
150px x 180px
Page icons are most often displayed at this aspect ratio. You can download a template from the tools page. USociable will auto size your picture to match, but it might distort it unless it is built to the proper aspect ratio.

Page Links
When you add pages, they will appear in your profile as icons that link to that page.

Description
This is a data field that can hold text, images and anything the other content boxes can hold.

Credit/Links
This shows the creator of the page or group leader. The links let people easily communicate with you.

URL and Embed
Use these links to send URL to someone via e-mail or the embed code to embed your page in another site.

Similar Pages
This database driven window shows similar pages in the same category.

Left Side Content
When you paste content into your right and left side content boxes, they will appear on your page. On the left they appear here and shove down the other boxes.

Right Side Content
When you paste content into your right and left side content boxes, they will appear on your page.

500px Columns
Your profile is divided into two main columns that are 500px wide. This allows a little margin around the boxes without pushing out the overall 1024 table.

If you are placing images, videos, or other widgets, you might want to consider limiting the width of your embedded objects to 485px so you have a margin around it.

USociable Specs and Dimensions Page Spec Example

This uses the Dark Knight sample page to show you additional elements as they appear

Profile and Page Sizes

Profiles and pages have a maximum width of 1024 px. This is the main table that contains all the information. You will be able to customize your background image which will show behind your content and beyond the edges of the table on the left and right.

Page Icon 150px x 180px →

Page Icon 150px x 180px →

Credit/Links →
This shows the creator of the page or group leader. The links let people easily communicate with you.

Embedded Picture →
This is just the embed code from Photobucket (or any other service) pasted into the right content box.

Embedded Video →
This is just the embed code from another website. Again, you can adjust the maximum width of most objects and widgets you place.

Page Links →

Description Title →
Use this as a headline for the description text.

Description →
This is a data field that can hold text, images and anything the other content boxes can hold.

Slideshow →
This was created and is hosted by Photobucket. You can make slideshows of any group of pictures there. You can adjust the size of the object by changing the embed code to have a width less than 500px.

Left Side Content
When you paste content into your right and left side content boxes, they will appear on your page. On the left they appear here and shove down the other boxes.

Right Side Content
When you paste content into your right and left side content boxes, they will appear on your page.
